Faced with a limitation where agents cannot be configured individually and Portal connectivity is required - an additional configuration flag is available to allow for multiple agents to share a single waratek.properties file

```
com.waratek.SharedProperties=true
```

A separate **instance.waratek.properties** file will be created to store the credentials for each agent (these are numbered in ascending order)

If **com.waratek.SharedProperties** is not specified, the default value is **false**.

If **com.waratek.SharedProperties** is set to **false**, then multiple agents sharing the same waratek.properties file can still connect and onboard to the Portal. In this case, however, all agents sharing the same waratek.properties file would appear as a single '*instance*' in the Portal. This will render log entries and events indistinguishable in the Portal UI.

Note : all agents that use this flag (com.waratek.SharedProperties) must belong to a single Application in the Portal, this is mandatory configuration.
