

Waratek Java Upgrade

Version 22.0.5

2023-09-28

Release Notes Addendum

Waratek Java Upgrade 22.0.5 has been certified with Portal Dedicated 6.4.2 on the following environments

- Waratek Java Upgrade 22.0.5 is certified with Portal Dedicated 6.4.2 (for both Elasticsearch version 7 and Elasticsearch version 8) and MC 5.5.6

Expected limitations with Waratek Java Upgrade 22.0.5 integrating with Portal Dedicated 6.4.2

- Waratek Java Upgrade Agent 22.0.5 does not support Portal Cloud.

The following is a list of expected behaviours that will impact the User in Portal Dedicated 6.4.2 when using Waratek Java Upgrade 22.0.5 Agent. These occur as the features were added in later Waratek Java Agent versions, and those features have not been backported to this 22.0.5 release.

- Advanced Search for events not supported using rule type.
- Trigger Details page does not display rule type information.
- Event Trigger reports do not contain rule type information.
- No support for Event Buffer Count, Last Event Write Date, or Event Status on Agent Details page.
- No support for `-Dcom.waratek.debug.transport.file` Or `-Dcom.waratek.debug.mc` options (Agent to Portal Dedicated communication issues will not be logged).
- No support for Portal control over Security Events throttling. (The number of security events sent to Portal storage is not controlled/limited by the Portal. Manual control using startup flag `com.waratek.MaxEventsPerRule` is supported.)
